

Asset Management Services

Asset Management Services are the key to effective management of all businesses, since they cannot manage what they cannot identify and measure. Integrated with e-Procurement, Asset Management encompasses the whole of the asset life cycle from initial purchase request to the point it leaves the organisation. Integrated with other managed services, Asset Management is crucial part of the process to reduce the Total Cost of Ownership. Extending the scope of Asset Management to Configuration Management provides further business benefit by completing the infrastructure management picture. Gartner Group estimates that with an effective Asset Management program with best practice tools and business processes, organisations can save 13% of their annual asset management costs.

Customer Needs

Over the years most organisations have focused upon managing the business application they have implemented, and paid scant attention to the distributed infrastructure they were steadily building. Today's business and IT infrastructure is crucial to the successful operation of most businesses. Effective Asset Management provides the key to achieving higher productivity of assets and their users, and a lower Total Cost of Ownership (TCO) of them. OpsCentre offers five Asset management-related services, enabling you to gain both fiscal and physical control of assets:

- Infrastructure Discovery
- Inventory Management
- Procurement management
- Asset Management
- Configuration Management

We utilise a number of industry standard, best-of-breed, software tools, to underpin these consultancy services, including Loc8, ITSM, etc etc

Benefits

- Complete and up to date inventory of all asset classes, their location, use and owners
- Effective Warranty and Maintenance Management
- Accurate accounting and depreciation of assets
- Integration with facilities management, service desk functions
- Improved incident and change management processes
- An enabler to more effective use of IT assets
