

## Global Solutions for GRC of Organizational Resiliency

### International Overview

In today's global business environment it is essential that Business Continuity solutions are globally available and can be used and managed seamlessly across international borders. Multinational businesses need a solution that encompasses internationally recognized standards and can be supported across the globe. RecoveryPlanner provides a unique set of integrated functionality along with a network of international partners to deliver expertise and a mature software that supports global BCM regulations.

### Global Reach

RecoveryPlanner supports a multinational customer base with users in countries all over the world. The RecoveryPlanner "RPX" software is designed to accommodate the full complement of organizational resiliency requirements of global organizations. With All-in-One functionality for BIA, Risk, Crisis & Emergency Management, BCM, DR, Supply Chain, Vendor Management and Compliance, these management processes are standardized and simplified across your enterprise and could integrate with your other GRC efforts.

With internationally hosted SSAE 16 certified data centers, availability, security, and performance are assured around the globe. Your mission critical business continuity application and data are always available anywhere across the globe.

### Global Experience

Leveraging the experience of many successful global deployments, RecoveryPlanner brings together a world-class web-based software with a global professional services team to manage the most complex deployments. The RPX system is designed to support localization in the global work-place, business processes that may go across borders and to automatically detect the user's language of preference.

Currently there are RPX international language editions in multiple languages with more languages to follow. Support is available in a variety of languages and for extended hours. These international editions encompass all of the world class RPX functionality. Guided by recognized international standards and guidelines such as DR11, NFPA 1600 BCI, ISO 31000 and ISO 22301, the RPX application provides a structured framework that simplifies and improves the overall business continuity and other management processes.

### Global Benefits

- |                           |                              |
